Finance *Customer Assistant* Bot **Proof-of-Concept**

BY SASHA ANNABEL

User Problem Into Requirements

	User challenges	How a finance bot brings good news
1	**Information overload** to sift through thousands of complex transaction data	Instant process to distill massive datasets into clear, personalized spending insights.
2	**Tedious and error-likely** to do manual calculations of spendings.	Multi-layered validation logic ensures every insight is data-grounded and mistake-free.
3	**Time-consuming and costly** to contact the bank for support	On-demand assistance that answers complex queries in seconds, not minutes.

How Chatbots Benefits Banking Business

Greater Operational Efficiency

Automation of routine/basic tasks allow reallocation of human talent to higher-value activities and predicted 30% reduction of operational costs.

Higher User Loyalty

People (Gen-Z dominant) confidently switch banks that provides more relevant advice on financial health.

Better Capital Protection

Slow fraud detection becomes instant, conversational mitigation, reducing response times.

Finance Bot
Proposed Concept

A 24/7 available chat bot that serves the customer as its *financial agent*, able to answer user's queries <u>based on correct and relevant data</u> within its declared function capabilities and access.

MAIN FEATURES

1. Natural, any-language interface
    - Bot talks in a human way
2. Real-time transaction data analysis
    - Bot filters for necessary data in seconds
3. Personalized insights
    - Bot is tailored for every customer's data

REQUIREMENTS PRIORITY

1. Accuracy (data integrity)
2. Decision transparency
3. Data privacy
4. Latency of process
5. Cost of use
6. Reliability

Finance Bot
Scalability Opportunities

ADDITIONAL FEATURES

1. Proactive recurring bill alert
   - Bot reduces late fees
2. Anomalous activity flagging
   - Bot spots suspicious transactions
3. Service concierge
   - Bot introduces bank products (loans, insurance) and routes to human expert
